

DeltaXML - An Introduction

Who are we?

DeltaXML is a specialist provider of XML software tools to some of the world's largest publishing companies. Personal support, service and maintenance are at the heart of what we do for all our clients, small or large. We do not outsource development or support.

Located in Malvern in England we are a small team with a global reach.

What do we do?

We provide the best tools in the world for managing change in XML. We have been focused on this area for nearly 10 years and bring unparalleled experience to the field of change management in XML. Our tools can be integrated into your application to manage any process which involves change in XML.

What is DeltaXML Core?

The DeltaXML Core software tool is designed to manage changes in XML data in any Java or .NET application. API access provides the ability to slot DeltaXML into any other application. With DeltaXML Core in place you can integrate the following processes into your workflow:

- Diff
- Compare
- Review
- Red Line
- Merge
- Translation Update
- Regression Test

DeltaXML Core's functionality enables your application to:

- Identify changes
- Display changes
- Process changes

 Morse

...and many others

Where can you use DeltaXML Core?

XML
 XHTML
 Custom XML
 DocBook XML
 DITA XML
 OpenDocument XML

Where will you find DeltaXML Core?

You may not be aware of DeltaXML Core in an application which you are running. You may just see that some text has been red lined, or that a document is marked with changes which you can accept or reject. DeltaXML Core has been chosen by many systems integrators and application vendors to run at the core of other applications. This provides real control over change in XML.

DeltaXML Core is typically in use in the following applications.

- Content Management Systems
- Document Management Systems
- XML Editing Environments
- Enterprise-wide XML Publishing Systems
- XHTML Editors
